SUMMARY

Electronics graduate with strong foundations in **Java, Python, Data Structures & Algorithms, and Object-Oriented Programming**. Experienced in developing AI-powered and full-stack applications using MySQL, HTML, CSS, and JavaScript. Passionate about software engineering, AI, and mobile technologies, with strong problem-solving skills and a desire to build impactful applications.

SKILLS

- **Programming Languages:** Java, Python, C
- **Databases:** MongoDB, MySQL
- **Web Technologies:** HTML, CSS, JavaScript, Firebase
- **AI & Technologies:** Machine Learning, NLP, Large Language Models (LLMs) (Basic), Prompt Engineering,
- **Core Concepts:** Object-Oriented Programming, Data Structures and Algorithms.
- **Tools & Platforms:** Git, GitHub, VS Code, Render, Vercel, Linux.

WORK EXPERIENCE

DEC 2025 – MAY 2026

Design Verification Intern – Taras Systems and Solutions

- Collaborated with the verification team to analyze and debug digital designs using industry-standard methodologies.
- Strengthened analytical and problem-solving skills through simulation and verification tasks.
- Performed functional testing and debugging to identify and resolve design issues.

EDUCATION

KLH University, Hyderabad.

2023 – 2027

B. Tech in Electronics Communication Engineering

CGPA: 9.86

Sri Chaitanya Junior College, Hyderabad.

2021 – 2023

Telangana Board of Intermediate Education

98%

Lotus School, Hyderabad.

2020 – 2021

Telangana Board of Secondary Education

100%

PROJECTS

AI-Based Smart Student Feedback Analysis Web App

Tech Stack: Python, MySQL, HTML, CSS, NLP.

- Developed a web application to analyze **500+ student feedback responses** using Python, MySQL, HTML, CSS, and JavaScript.
- Automated report generation and dashboard creation, reducing manual analysis effort by **60%**.
- Implemented NLP-based sentiment analysis achieving **85% classification accuracy** through data preprocessing and feature engineering.

Emotion Detection Using Prosodic Features

Tech Stack: Python, Scikit-learn, NumPy

- Developed a machine learning model to classify emotions from speech using prosodic feature extraction.
- Achieved approximately **85% classification accuracy** across multiple emotion categories.
- Processed and analyzed **1000+ audio samples** for training and evaluation and applied preprocessing and feature engineering to improve model performance.

FPGA-Based Defibrillator Pulse Detection using ECG Signals

Tech Stack: Verilog HDL, Xilinx Vivado, MATLAB

- Designed and implemented an FPGA-based system for real-time ECG signal processing and defibrillator pulse detection.
- Developed digital signal processing logic to improve pulse detection accuracy to **90%+**.
- Optimized hardware implementation, reducing processing latency by **30%** and validated system functionality through simulation and performance testing.

CERTIFICATIONS

- AWS Certified Cloud Practitioner (AWS)
- MongoDB Associate Developer

ACHIEVEMENTS

- **3rd Place** - College Hackathon (Build-A-Thon)
- Solved 650+ coding problems across CodeChef, LeetCode, and Codeforces, strengthening data structures, algorithms, complexity optimization, debugging, and problem-solving abilities.
